

HOW TO IDENTIFY COUNTERFEIT BATTERIES

GENUINE

The screws on a genuine battery are more prominent, dome shaped and silver in colour, whereas those on a counterfeit have flatter heads and appear to have a black coating (although this could wear off).

COUNTERFEIT

These two logos will never appear on the same battery - you will only ever find one or the other.

This is a fictional part number and does not exist. To verify if a battery part number is genuine, please call our Helpdesk on 01753 500934.

Obvious spelling errors and commas in web addresses also indicates that your battery is counterfeit.
